

Kings & Quadraphages

K-1 game

Sportsmanship

- Before each game, players should shake hands and wish opponent good luck.
- After each game, players should shake hands and say “Good game.”

Materials

- Kings & Quadraphages gameboard
- 2 pawns of different color
- 60 chips – 30 each of the same two colors as the pawn
- Flag card (Players should have possession of the flag card before starting a turn and before declaring a win.)

Goal

- To win, a player must succeed in entrapping the opponent’s king so that it can no longer be moved in any direction.

Designating the Starter

- One of the pawn colors is chosen as the starting color. A player places the red pawn in one hand and the blue pawn in the other. An opponent chooses the right or left hand. If the opponent chooses the pawn that was selected as the starting color, that player begins the game. If not, the opposing player begins.

Set Up

- The kings (pawns) are placed onto the squares marked with a crest.

Rules

- Players take turns and pass the flag card upon completing each turn.
- Each player’s turn consists of two parts:
 - First, moving the king (pawn) **one** space to any adjoining unoccupied square (either horizontally, vertically, or diagonally).
 - Second, placing a chip (quadraphage) on any **unoccupied** square.
- Once a chip is placed onto a square, the space can no longer be used during play.
- Kings may not “jump” another king or chip.
- The crest marks have no significance other than to indicate the starting positions for each player’s king. During play, crest-marked squares are treated as any other square.

Calla *K-1 game*

Sportsmanship

- Before each game, players should shake hands and wish opponent good luck.
- After each game, players should shake hands and say "Good game."

Materials

- Calla Gameboard
- 32 small cubes
- Flag card

Set up

- Four cubes are placed into the two center "pits" on each player's side of the board. Three cubes are placed into each of the other eight pits.

Goal

- To win, a player must accumulate more cubes in their calla than the opposing player's calla by the end of the game OR be the first player to accumulate 17 or more cubes before the end of the game. If there are no cubes to play in the player's pits, the game is over.

Designating the Starter

- A player places one cube in one hand in two cubes in another hand. An opposing player chooses the right or left hand. If the hand with one cube is selected, the player is designated as the beginning player. If not, the opposing player begins.

Rules

- Players take turns and pass the flag card upon completing each turn.
- For each turn a player picks up all of the cubes from one of his/her pits and (moving in a counterclockwise direction) places them, one by one, into adjoining consecutive pits or his/her own calla.
- No cubes are placed into an opponent's calla. Should a player have additional cubes after placing one cube in each of the opponent's five pits, the opponent's calla is bypassed.
- If the **last** cube to be placed on the gameboard lands in the player's own calla, an additional turn is granted.
- If the **last** cube to be placed on the gameboard lands in an **empty** pit on the player's side, all of the opponent's cubes contained in the pit directly across the board are "captured" and placed in the player's **calla**. The last cube placed in the empty pit on the player's side **remains** in that pit.

Star Track

K-1 game

Sportsmanship

- Before each game, players should shake hands and wish opponent good luck.
- After each game, players should shake hands and say "Good game."

Materials

- Star Track Gameboard
- Two pawns of different color
- A paper bag or other container
- *Plastic links of various colors connected in the following manner:
 - 2 chains of 9 links
 - 3 chains of 8 links
 - 4 chains of 7 links
 - 5 chains of 6 links
 - 6 chains of 5 links
 - 7 chains of 4 links
 - 8 chains of 3 links
 - 9 chains of 2 links
- Flag card

Set up

- The pawns are placed on the two starting pentagon spaces
- All chains are placed into a container so that chain lengths are out of view.

Designating the Starter

- A player places 1 pawn in each hand. Without looking, an opponent chooses a color and picks a hand. The player that has the "chosen" color begins the game.

Goal

- To win, a player must reach or go beyond the last pentagon space when a round has been completed.

Rules

- Players take turns and pass the flag card upon completing each turn.
- During a turn, a player draws 2 chains from the container, selects one of the chains, places the unused chain back into the container, and announces the number of links in the selected chain. (Players must take the first two chains of links touched.)
- A player moves the pawn the number of spaces forward on the gameboard to match the number of chain links selected. The player then hands the chain links (and the flag card) to the opposing player. After checking the number of links in the chain, the opposing player places the links into a discard pile.
- **Starred spaces:** If a pawn lands on a starred space, it must be repositioned to the previous starred space. If a pawn lands on the first starred space, it must be returned to the START position.
- **Numbered Spaces:** If a pawn lands on a numbered space, it is advanced as many pentagon spaces as the number indicates.
- **Occupied Spaces:** When a player lands on an occupied space, the player may move the opponent's pawn back two spaces. If the opponent's pawn ends up on a starred or numbered space, the above rules do not apply.
- **Recycled Chains:** If all the chains have been used and the game is not over, the discarded chains may be replaced into the container.
- **Round Game:** Star Track is a round game. A round game consists of the beginning player and the second player completing a turn. If both players reach or go beyond the last pentagon space at the end of a round, a tie is declared.

Hex-A-Gone *K-1 game*

Sportsmanship

- Before each game, players should shake hands and wish opponent good luck.
- After each game, players should shake hands and say "Good game."

Materials

- Hex-A-Gone Gameboard
- Pattern blocks – 6 each of yellow hexagons, red trapezoids, blue rhombi, green triangles, orange squares, and tan rhombi
- Flag card

Goal

- To win, a player must be the last one to place a pattern block onto the gameboard. (This does not imply that the gameboard will be completely covered or that all pieces will be used.)

Set up

- All pattern blocks are spread out beside the gameboard.

Designating the Starter

- One player selects a green triangle and blue rhombus and places one in each hand.
- An opposing player chooses a hand.
- The player with the green triangle is the designated starter.

Placement Options

- Orange, Yellow, and Brown pattern blocks may only be placed in one spot.
- Blue and Red pattern blocks may be placed in two spots.
- Green pattern blocks may be placed in three spots.

Rules

- Players take turns and pass the flag card upon completing each turn.
- During a player's turn, one, two, or three different colored pattern blocks are selected to be placed on the gameboard. A player may not select more than one block of the same color. All desired blocks must be selected before placing them onto the gameboard. Once one block is placed on the gameboard, no other blocks may be selected from the bank.
- **Placement:** Blocks may be placed anywhere on the gameboard provided each block either completely covers a geometric region or allows space for other pattern blocks to be placed in a later turn. For example, a triangle may be placed onto a hexagon since a trapezoid and blue rhombus could be placed at a later time to complete the figure. However, a square or tan rhombus may not be placed into a hexagon since the hexagon would not be able to be completely filled with other pieces.
- Pattern blocks may not be placed across a solid line.

Shape-Up *K-1 game*

Sportsmanship

- Before each game, players should shake hands and wish opponent good luck.
- After each game, players should shake hands and say “Good game.”

Materials

- Shape-Up Gameboard
- One regular die
- Four transparent chips (two of one color and two of another)
- Flag card

Designating the Starter

- One player from each team rolls the die. The player with the lower roll is the designated starter.

Set up

- The starting player selects two transparent chips of the same color. The remaining chips belong to the opposing team.
- Each team places both chips into the designated Start Space in the center.

Goal

- To have both chips of the same color on spaces containing the **same shape** but **different size**.

Rules

- Players take turns and pass the flag card upon completing each turn.
- Players take turns rolling the die. The die indicates the total number of spaces that can be moved. For example if a 4 is rolled, a player may move one chip four spaces or each chip could be moved so that they total 4 spaces.
- **One Rule:** If a one is rolled, a player moves one of the opponent’s chips one space. Neither of the player’s chips are moved when a 1 is rolled.
- Chips move in any direction from the “Start” position. During a turn, a player may not change the direction of a chip’s movement.
- **Bumping Back to the Start:** There are 3 ways for a player to bump an opponent’s chip(s) back to the Start Space:
 - Moving a chip onto a space occupied by the opponent; or
 - Moving a chip onto a space containing a figure of the **same shape** and **same size** as the space occupied by the opponent’s chip;
 - On a roll of one, moving an opponent’s chip to a space containing a figure of the **same shape** and **same size** as the space occupied by the player’s chip.
- **One Chip to a Space:** Only one chip may occupy any given space.
- **Start Space:** Chips can be moved through the Start space, and more than one chip is allowed on the Start space.
